

CDC RECOMMENDED GUIDELINES FOR COVID VACCINE BOOSTERS

CDC recommends that people in the following groups should receive a booster shot of Pfizer-BioNTech's COVID-19 Vaccine at least 6 months after completion of their 2-dose Pfizer series:

- People ages 65 years and older
- Adults 18+ living in long-term care settings
- People ages 50–64 years with underlying medical conditions (cancer, chronic kidney disease, chronic lung disease, dementia or other neurological conditions, diabetes, down syndrome, heart conditions, HIV, immunocompromised state, liver disease, overweight and obesity, pregnancy, sickle cell disease, smoking (current or former), solid organ or blood stem transplant, stroke or cerebrovascular disease, substance use disorders.)

People who may receive a Pfizer-BioNTech COVID-19 Vaccine booster include:

- People ages 18–49 with an underlying medical condition
- People ages 18–64 who are at increased risk for COVID-19 exposure and transmission due to working or residing in certain settings

People can talk to their healthcare provider about whether getting a Pfizer-BioNTech COVID-19 booster shot is appropriate for them
